

SMART INDIA HACKATHON 2026

TITLE PAGE

- **Problem Statement ID – SIH26202**
- **Problem Statement Title – Student Innovation** – Ideas focused on the intelligent use of resources for transforming and advancements of technology, combining artificial intelligence to explore diverse sources and derive valuable insights.
- **Theme – Smart Automation**
- **PS Category – Software**
- **Team ID – —**
- **Team Name – Autonova**

The Problem

Citizens face fragmented scheme information across multiple government portals, making it difficult to discover relevant benefits, understand eligibility, and complete applications.

- No single point of discovery
- Complex language and eligibility criteria
- Rural citizens are underserved.

The Solution

A unified platform that helps citizens quickly discover relevant schemes, understand them in plain language, and move seamlessly to the official government portals for application.

- One platform for all schemes
- Plain-language summaries of benefits, eligibility, and documents
- WhatsApp-first access for wider reach

How It Addresses the Problem

01

Discover

Search schemes by category, eligibility, or need from a unified source.

02

Understand

Get clear summaries of benefits, eligibility, and required documents.

03

Apply

Move directly to the official portal to complete the application.

Key Innovations and Uniqueness

WhatsApp Access

Works on basic phones without any app download.

Multi-Channel Support

Accessible through WhatsApp and email for inclusive support.

Bridge Model

Connects citizens to official portals without replacing government system

SchemeSetu: Technical Architecture

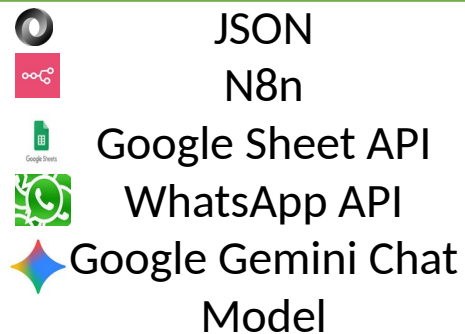

- User Input
- Use of NLP Technology
- Hybrid AI Core
- Scheme Database

⚙️ Core Technologies

Front End

Back End

🏆 Key Innovation: Hybrid AI Matching

- 1 **Deterministic Eligibility Rules**
Age · Gender · Category · Income · Occupation · State · Rural/Urban
- 2 **Semantic AI Search**
Use of Gemini LLM Model
- 3 **RAG-based AI Sahayak**
Hindi/English conversational guidance through WhatsApp & Web

Feasibility & Viability: Scheme-Setu's Path to Impact

FEASIBILITY ANALYSIS

✓ Technical

Modular web platform

✓ Data

Public schemes available

✓ Market

Large access + mobile reach

✓ Regulatory

Information aggregator model

VIABILITY INDICATORS

Reach

Addressable population

2

Levers

Impact levers

1. Awareness
2. Accessibility

Scale

Scalable model

CRITICAL CHALLENGES & MITIGATION STRATEGIES

Uptime

Stale results can weaken trust and reduce usage.

Cache key pages and run regular freshness checks.

Mitigation

Monitoring and auto - recovery

Rule Accuracy

Wrong guidance creates confusion across schemes.

Use version control and validate against official sources.

Mitigation

Regular data validation and update workflow

Adoption Trust

Low trust can slow uptake among citizens and partners.

Start with pilot partnerships and visible public-sector support.

Mitigation

Awareness and Transparency

Accuracy Risks

Errors in content or links can damage credibility.

Surface official links only and keep review workflows in place.

Mitigation

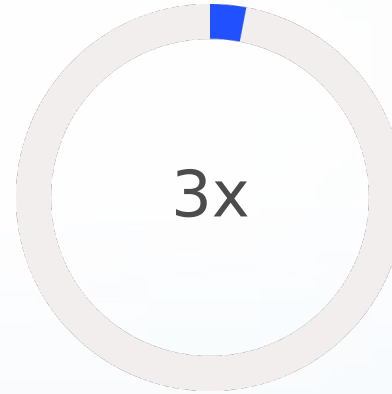

Automated link checks

Feasible with phased rollout and government partnerships

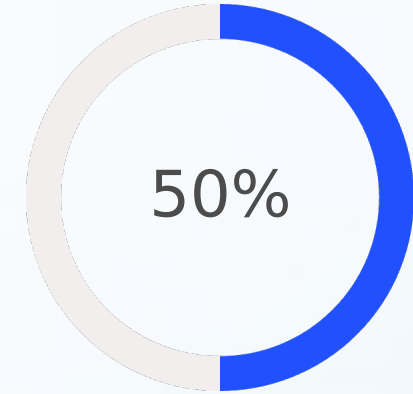

Impact & Benefits: Transforming Lives

Social Impact
Inclusive Access

Economic Impact
Economic Mobility

Systemic Impact
Reduced Burden

1

 Scheme-Setu discovers schemes

2

 Citizen access support faster

3

 Communities gain trust, mobility, and inclusion

Social Benefits

-  Inclusive Access for all communities
-  Reduced Inequality through equitable discovery
-  Community Empowerment and agency
-  Knowledge sharing and awareness

Economic Benefits

-  Financial Inclusion and subsidies access
-  Employment & Skill Development opportunities
-  Economic Mobility and poverty reduction
-  Better resource utilization

Systemic Benefits

-  Digital Efficiency and reduced paperwork
-  Government-Citizen Trust building
-  Transparent and accessible information
-  Sustainable development awareness

Empowered citizens. Efficient government. Inclusive India.
